

Purpose Bring reliable electricity, clean water, and internet to off-grid Palestinian communities in Area C of the		Impact Communities meet basic needs and build resilience against displacement: children stay connected to	
Problem No access to the national electricity grid, clean water, or internet. Building permits for Palestinians in Area C are almost never granted (~99% rejection rate). Self-built systems risk confiscation or demolition as 'illegal construction'. Ongoing risk of forced	Solution Off-grid renewable energy (solar & wind), clean water systems, wireless broadband internet, and livelihood support —	Unique Value Proposition The only provider combining electricity, water, internet, and livelihood support into one integrated, long-term service — built specifically for communities facing legal and political barriers to conventional infrastructure, sustained through ongoing maintenance	Positive Advantage 15 years of trust and relationships across 140+ communities, plus the technical capability to install and repair off-grid
	Key Metrics 10,000+ people / 2,400+ households served. 140+ communities partnered with. % uptime of 24/7 power & water systems		Channels Direct field teams (assessment, install, support). Partnerships with community leaders. NGO and international donor
Customer Segments Off-grid households across Area C. Farmers & herders (power/water for agriculture, dairy refrigeration). Children & students (power/internet for education). Community leaders as coordination partners.			
Cost Structure Field operations and installation in remote, high-risk areas; ongoing system maintenance and repairs; engineering and technical staff; community training and capacity-building programs.		Revenue Foreign government grants (e.g., Dutch Ministry of Foreign Affairs); local prepaid electricity cards capped at ~\$12/month, keeping power affordable while contributing to maintenance costs; additional NGO/donor funding.
